1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 27-31, 33 and 34 are rejected under 35 U.S.C. 102(e) as being anticipated by Igarashi et al. (U.S. Patent No. 6,037,630).

In re claim 27, Igarashi (Figs. 9, 10) discloses

A substrate (1);

A gate insulation layer (5) formed above said substrate;

A gate electrode (7a, 9b) formed above said gate insulation layer, said gate electrode having an upper portion comprised of polysilicon and a lower portion, said upper portion having a plurality of extensions (of 9b) formed thereon, said extensions of said upper portion extending laterally beyond said lower portion of said gate electrode by an amount that decreases from top to bottom of the upper portion.

In re claim 28, Igarashi discloses the device of claim 27, further comprising an insulating material (7b) positioned adjacent said lower portion of said gate electrode and under said extensions formed on said upper portion.

In re claim 29, Igarashi discloses the device of claim 27, wherein said substrate (1) is comprised of silicon.

Art Unit: 2815

In re claim 30, Igarashi discloses the device of claim 27, wherein said gate insulation layer (5) is comprised of silicon dioxide.

In re claim 31, Igarashi discloses the device of claim 27, wherein said lower portion of said gate electrode (7a) is comprised of polysilicon.

In re claim 33, Igarashi discloses the device of claim 27, wherein said extensions (of 9b) are comprised of polysilicon.

In re claim 34, Igarashi discloses the device of claim 27, wherein said upper portion of said gate electrode and said extensions have a combined lateral dimension that is approximately 5-100 percent greater than a lateral dimension of said lower portion of said gate electrode.

Response to Arguments

3. Applicant's arguments with respect to claims 27-31, 33 and 34 have been considered but are moot in view of the new ground(s) of rejection.
